

The Strap Lock system for Acoustic and Electric Guitars and Bass

LOXX

"Please welcome on stage - the lock star!"

LOXX is the superior strap lock system that combines great design with thoughtful presentation and outstanding instrument protection.

This unique, German engineered design with its inner spring and high-grade materials keeps your instrument safe while retaining its ease of use - even under the most extreme conditions.

Unlike other systems, LOXX has a low profile together with a one handed "easy on - easy off" engage and release action. Yet it can resist a pull-out force of up to 220 lbs. This, combined with its ability to cover a broad range of strap sizes and thickness, makes it the most advanced and effective strap lock design available.

LOXX clicks in to place easily and is released by simply pulling the locking head. The locking head has serrated 'teeth' that firmly grip the strap while the matching washer is easily and firmly attached with the LOXX tool - no more fighting to fit a lock to your strap, no more nut and washers falling on stage halfway through the performance! The same LOXX tool is also used to attach the LOXX screw to the guitar.

The LOXX system is available in a number of different finishes, with a version for electric guitar and bass and another dedicated to acoustic guitars. To complete the line-up the LOXX Screw Set carries 6 screws including an extended pair in case the original strap button hole is worn.

LOXX For Electric

LOXX for Electric 'Box' carries the two upper parts, the two screws and the LOXX tool.

It is available in a number of different finishes (see below) and can be paired with the LOXX Screw Set to allow one strap to be used on different guitars.

LOXX For Acoustic

The LOXX Acoustic Guitar Set carries the two upper parts, two short screws and a pin plate with its own mounting screws if you want one end of your guitar strap to attach to the headstock

And just for completeness, the pack includes a drill bit to drill the correct diameter holes to fix the plate.

Of course, a manual is included with every LOXX set to assist you in installation. Some acoustics come with only one factory fitted strap pin. In this case we always recommend that you consult a professional if you are at all worried about drilling additional holes in your guitar.

The Acoustic set is not available in all finishes.

LOXX Screw Set

The LOXX system features a unique additional Screw Set!

This LOXX Box carries six screws for electric guitars and bass. Additional instruments can be equipped with the screws so that the musician can use their favourite strap for all.

The set includes three different screw versions;

- A screw set with a strap fitting to allow the use of a non LOXX fitted strap.
- A screw set with an extended thread for worn screw holes.
- A standard screw set.
